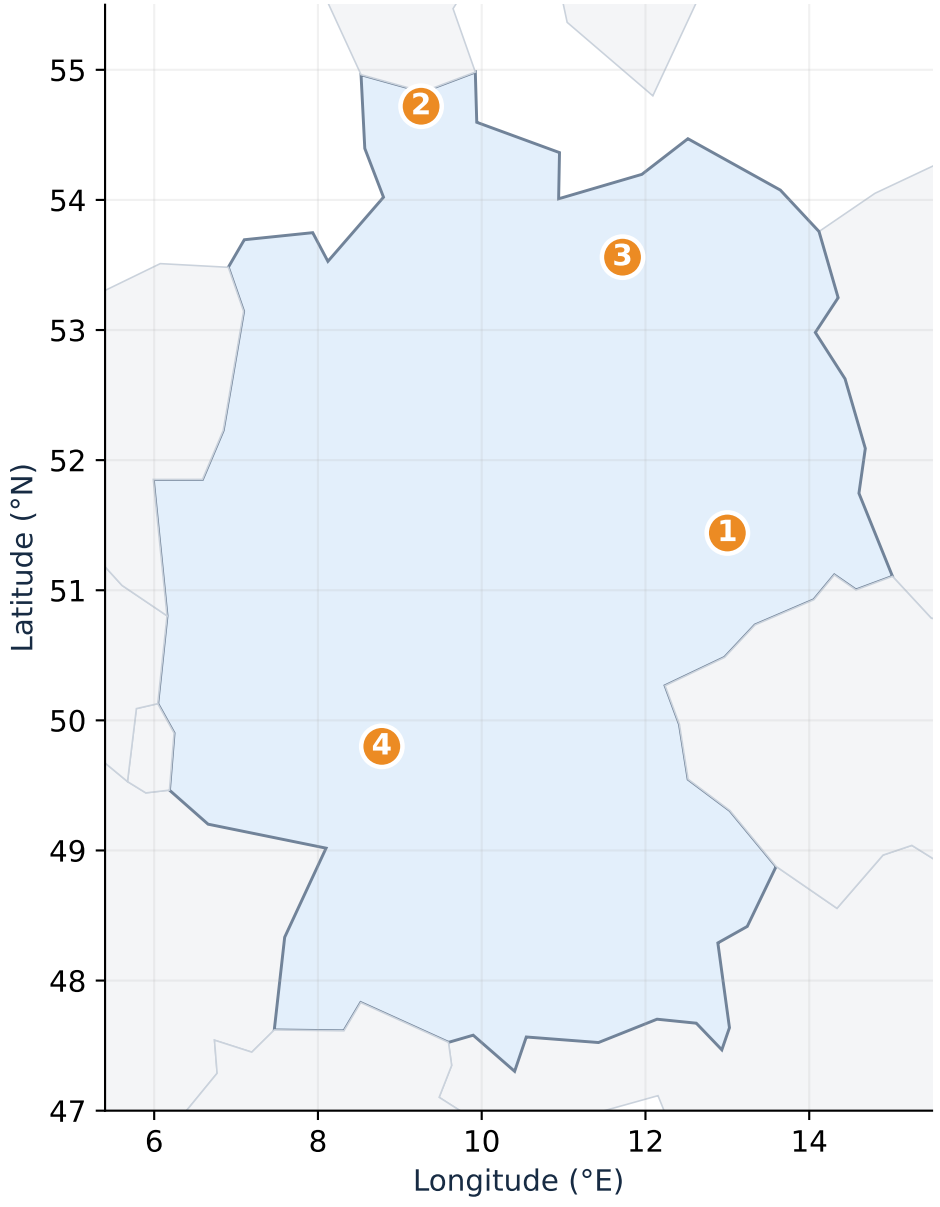
Germany solar forecast | selected weather points

Four input locations retained in the online configuration · snapshot 3 November 2026

Currently deployed request locations



Point	Latitude °N	Longitude °E
1	51.44	13.00
2	54.72	9.26
3	53.56	11.72
4	49.80	8.78

Selection lineage

Capacity-weighted clustering (k = 4)
Original sample: 16 solar assets, 1,619.711 MW
Centroids → ERA5 → nominal GFS grid

The collector uses the coordinates above.
They differ slightly from the original planned grids.
The newer MaStR-based candidates are not deployed.

Coordinates: deployed dashboard + collector configuration. Boundaries: Natural Earth (public domain).
